Product description:

Pair of Competition Model Pole Vault Stands IAAF Approved

A fundamental part of a **Pole Vault system** , the Ritti, in this **competition version** , for **national and international** competitions, are made of **aluminum and steel** and have **IAAF approval**.

The **aluminum uprights** have an adjustment system based on **telescopic rails** , which allow it to reach **650 cm in height**.

The **jump size** is easily adjustable and is displayed on the **metric integrated** into the structure.

The **support bases** are instead made of powder-coated **steel** , and equipped with **wheels for transport**.

These are easily separable from the uprights, so as to also allow for **easy storage** .
