

Vortex for javelin throwing training

Product features:

Material: Foam

Length:

Product description:

Between the game and the sports tool, the **Vortex** is used in **athletics competitions as a preparatory step for javelin throwing, up to the age of 14**

It is a sort of oval rubber ball with a tail capable of balancing the tool in flight.

It is also equipped with plastic holes from which the air entering emits a **characteristic whistle** which helps to follow its trajectory.

Thanks to its usefulness, ease of use, and **safety due to the soft material with which it is made** , it is one of the favorite items of the major **FIDAL affiliated** sports clubs
