Product description:

Reuther type **elastic platform** for gymnastic exercises , with **plywood structure and carpet surface**. Used by **athletes in the hitting phase** , the Reuther platform allows you to receive an **excellent push** , to reach the necessary elevation to complete the required exercise.

This particular model has **9 conical steel springs** and a **surface covered in non-slip carpet** .

The structure is **made of 30 mm plywood** in the lower part, the base, and 20 mm in the upper part, this is in turn covered with a **layer of non-slip carpet** which offers the greatest possible grip and prevents the gymnast from slipping during the phase of thrust.

The support base is then equipped with **non-slip rubber feet** , which give the entire platform an exceptional grip on the ground and consequent great stability.

With a length of 120 cm, and a width of 60 cm, this trampoline falls within the specifications defined by the International Gymnastics Federation - FIG
