

## Jump Tester Elevation meter jump tester

### Product features:

Finish: Powder-coated

Characteristics:

Height:

Mepa: Disponibile

### Product description:

#### Jump Tester for measuring elevation.

Accessory commonly used in sports such as **basketball and volleyball** , this **jump tester, or saltometer** , allows you to **measure the elevation reached by the athlete** during the jump.

The weighted base in powder **coated steel** , with **ballast and wheels** , guarantees a remarkable **stability** to the tool, and at the same time an excellent **ease of movement**.

The rod, on the other hand, is made of **galvanized steel**, resistant to rust , and has a terminal on which **colored wooden tiles** are mounted, which "define" the height reached.

**This is adjustable from a minimum of 250 cm to a maximum of 330 cm**
