

## Galvanized Steel Wall Volleyball System

### Product features:

Material: Galvanized steel

Material: 2 mm thick steel

Finish: Powder-coated

Pole section: 60 mm

Height:

Mepa: Disponibile

### Product description:

**Professional wall-mounted volleyball system** in galvanized steel, **complete with crank net tensioner** .

This system is produced entirely in our factories and is characterized by its solidity and ease of installation.

The system is made with **Ø 60 mm galvanized steel tubing** and powder **-coated steel sliding cursors** .

Thanks to the latter, it is possible **to adjust the height of the playing net** , thus being able to adapt the system for **women's (224 cm) and men's volleyball (243 cm)**.

The **tensioning** of the playing net takes place by means of a **net tensioner winch with crank** , mounted on one of the sliding uprights.

**The system can be installed** using 8 holes (4 per post) to be made in the wall.

**To complete the system** , it is advisable to purchase the **appropriate safety guards (art.GS1020)** which protect the players from injury and allow the playing field to be made safe.
