

Accident prevention protections for Wall Volleyball systems

Product features:

Sponge density: 21 kg/m³
Coating: PVC Tearing-proof
Internal diameter:
Outer diameter:
Height:
Mepa: Disponible

Product description:

Pair of **anti-accident protections** for **wall-mounted volleyball systems**.

Made of **5 cm thick cylinder-shaped sponge** and **covered with tear-resistant PVC fabric**, these protections are an essential accessory to complete **wall-mounted play facilities**

The protections go to **cover the pole of the volleyball facility**, up to a **height of 1.25 meters**, allowing a safe game and **safeguarding the athletes** from possible injuries.

The installation is simple and immediate, thanks to the **velcro strips with tear**, which allow an **easy assembly and disassembly** of the protections.

With an **internal diameter of about 120mm**, they adapt to **all our wall volleyball systems**.

With a small surcharge, it is possible to **customize the protectors** with an inscription, or the logo of your sports club, in this case, the color of the protectors will be white.

Once you have placed your order, send us the file to be created in vector format via email.
