

Height-adjustable floor stand for ballet barre

Product features:

Material: Galvanized steel

Material: Painted cast iron

Finish: Powder-coated

Height:

Product description:

Floor stand for ballet barre, adjustable in height and complete with cast iron base.

Thanks to the weighted cast iron base, this support allows you to **support the ballet barre**, and allow exercises to be carried out **without the need to drill the floor**.

On the **self-supporting cast iron support base** , a **periscopic** painted steel tubing is mounted, which allows you to **adjust the height of the wooden bar**.

In order to resist the continuous stresses due to the movement of the **adjustable slider** , this is made of **galvanized steel** and has **two pins** which allow **the height of the bar to be fixed and stabilized respectively**.

In addition to the advantage of being able to **move the barre as needed** , the most useful feature of this support lies in the **possibility of adjusting the height of the ballet barre from the ground** , on two sizes, **90 and 110 cm**, in order to allow **the exercises to be carried out to dancers of different ages**.
