

Curved back rest that can be attached to the Swedish backrest

**Product features:**

Sponge density: 21 kg/m<sup>3</sup>

Coating: Sky Suede

Dimensions:

**Product description:**

**Curved padded backrest for Swedish shoulder rest** The curved backrest is an **important complementary accessory to the Swedish wall bar** , as it allows the correct execution of various exercises.

**The backrest is made of wood** , padded with a layer of sponge and then covered in washable **synthetic leather** .

It is also **equipped with an "H" steel load-bearing structure with curved ends, which create practical hooks.**

This structure is then **screwed directly into the rear part of the backrest**, for a **solid and stable attachment to the backrest rungs.**

This detail makes the backrest of our production **structurally much more resistant** than others, where the hooks are not connected to each other.

Thanks to the dimensions of 58x36 cm, and the **quality of the padding** , it is **extremely comfortable** during use, making it easier to perform the exercises.

**Made in Italy product, entirely made in our factories**
