Product description:

Anti-trauma flooring in rubber granules 100x100x2(h) cm

Made of **rubber granules hot aggregated** with polyurethane binders, anti-trauma flooring is used wherever **a greater degree of safety is useful or necessary**.

Playgrounds, kindergartens, gyms, cycle and pedestrian paths, retirement homes, swimming pools, riding stables, garages and vans, terrace coverings.

In particular, this tile **protects athletes from injuries by** guaranteeing high impact absorption in the event of a fall.

Among the main characteristics of this anti-trauma flooring we find:

- high degree of shock, vibration and noise absorption
- Attenuates traumas and microfractures
- High protection of the underlying surfaces
- Anti-slip
- Draining power
- High permeability
- Easy installation and cleaning

The flooring can be laid directly or through the use of adhesives
