Product description:

Obstacle trolley on rubber wheels

Indispensable on every **athletics track** , this trolley allows you to **easily move obstacles from the track to the equipment storage and vice versa** .

The structure, which has a capacity of 15/18 obstacles (depending on the model) is made entirely of **steel with powder coating**, to guarantee **high durability** and resistance to atmospheric agents.

The **rubberized wheels with a diameter of 25 cm** , **two of which are pivoting**, together with the front drawbar, **allow the trolley to move easily** , even on rougher terrain.

Possibly, upon specific customer request, it is possible to create tailor-made trolleys, so as to adapt perfectly to every need.
