Product description:

Infirmary bed for medical examination, with tilting headboard, roll holder and safety sides

Made of **tubular steel** , with **powder coating** , the **medical examination table** is an indispensable part of the **furniture inside an infirmary** or a doctor's office.

This particular version features not only the classic **headboard that can be tilted** to multiple positions, but also the **integrated roll holder and two removable safety sides**.

It is an accessory, which makes this **bed perfect for use in accommodation facilities dedicated to the elderly, such as RSAs, RSSAs and retirement homes**, where an additional safety measure is necessary to protect the patient.

Unlike the standard model, this bed is also wider (87cm) making it **perfect for hosting patients suffering from obesity**.

The **backrest and headboard padding** has a **height of 8.5 cm** and is made of high-density flexible **expanded polyurethane foam (PU)**, covered in **soft synthetic leather**.

The synthetic leather covering is very practical, as it **is resistant to wear and dirt** , thus allowing for deep cleaning and **excellent sanitisation**.
