Product description:

Pair of safety guards for volleyball trellis system with T base

Pair of safety guards in **expanded polyurethane foam** with a density of 21kg/m³ and **PVC coating** , for **transportable trellis volleyball system with "T" base**.

The protections are made up of **two trapezoidal panels** , **equipped with eyelets** on the long sides to allow them to be installed and fixed on the supporting structure of the trellis volleyball system.

These **protect the athletes from accidental bumps and possible injuries** during the hectic phases of the game.
