

Ball Catcher training Volleyball complete with weighted base

Product features:

Material: Steel

Finish: Powder-coated

Accessories:

Height:

Mepa: Disponibile

Product description:

Ball Catcher training Volleyball complete with weighted base

In the game of volleyball , **receiving the ball is fundamental**, as it initiates the action and fundamentally determines its development.

A perfect reception then allows the setter to be able to **better handle the ball, and allow the hitter to score.**

The ability to **control the ball in the receiving phase** therefore becomes of **primary importance** , and it is from this point of view that the **Ball Catcher performs its main function.**

The setter must be able to control the ball perfectly and **direct it into the net** , the exercise can be made more or less difficult by moving away from the apparatus, **or by lifting and tilting the net.**

The Ball Catcher produced by Gana Sport is made of **powder coated steel** and has an **adjustable height of over three metres.**

It is delivered **complete with a weighted base, net, and is equipped with a pair of ABS wheels** to help it move.
