

Adjustable and weighted Mini Volleyball system

Product features:

Material: Galvanized steel

Finish: Powder-coated

Mepa: Disponibile

Product description:

The **minivolleyball system** is made of hot-dip galvanized steel and is equipped with a 15 kg weighted plate, expandable up to 30 kg thanks to the possibility of inserting 5 kg cast iron discs (not included).

The **system** can also **be anchored to the ground** using the supplied bracket. It is advisable, for a game in perfect safety, to anchor the system to the ground.

Among the best features of this product is the **adjustability of the poles**.

In fact, the height allows the net to be positioned for the first level **mini-volleyball game** at 2.15 m, for the second level 2.10 m and possibly **also adaptable to badminton** at 1.55 m (in this case the lower net strap must be tied directly to the pole)

However, if desired, it is possible to position the net in a personalized range which varies from 2.20mt up to about 1.30cm.

The system can possibly be equipped with **tubular sponge protection** (art.GS0482)

Made in Italy product, entirely made in our factories.
