

Accident prevention protections for vertical poles for soccer goals measuring 3x2 metres

Product features:

Sponge density: 21 kg/m³

Coating: PVC 650gr/m² Fireproof- Class 2 fire rating

Certifications: UNI-EN 913:2009

Length:

Product description:

Pair of safety guards for vertical poles for regulation soccer goals 3x2 meters UNI-EN 913:2009 tested For the safety of your soccer field!

The game of football is loved and practiced all over the world, from an early age, this sport is played in parks, on the streets and in **equipped facilities**.

It is precisely for the latter that we have created a **set of accident prevention protections to be mounted on the soccer goal posts** , in order to protect young footballers from traumas and injuries that they can incur when practicing this sport.

The protections are made of sponge with a density of 21kg/m³ and a thickness of approximately 5cm, these are then **covered in 650g/m² fireproof Class 2 PVC**.

To allow for **simple closure** , they are equipped with **eyelets on the long sides** through which practical cable ties (not included) can be passed.

the basic set includes protections for a single goal (2 posts) to which it is possible **to add an additional protection for the crossbar**.

In its basic version, **the set is suitable for any door with a height of 2 meters (3x2, 4x2, 5x2,6x2)**

This set of protections made by Gana Sport is also UNI-EN 913:2009 tested against accidental impacts for sporting use
