

Ballasted tennis system transportable on wheels

Product features:

Material: 1.5mm thick tubular steel

Finish: Powder-coated

Certifications: Autocertificato UNI-EN 1510:2005

Product description:

The self-supporting tennis facility is made of **steel tubing**.

The particular structure is made up of several pieces which, once assembled, create a single-body system that runs horizontally across the entire width **of the regulation tennis court**.

Furthermore, **the system** is equipped with **wheels** that allow **transportation without the need to dismantle the net**.

The particular system of **mobile ballasts** increases stability during the game, leaving free choice on the loads to be placed, which can be purchased separately in the form of **cast iron discs** (standard diameter of the barbell 25 kg)

Net not included

Made in Italy product, entirely made in our factories.
