### Product features:

Maximum User Capacity: 160 Kg

Dimensions Open:

Product weight:

Warranty: 12 months for professional use

Maximum loadable weight:

Weight pack:

### Product description:

The **DIAMOND Dual Pulley Multi Trainer** is an extremely innovative and cutting-edge machine designed to include all the most used machines in a commercial environment in a single tool.

Specifically, the machine is made up of a **dual pulley with a double 90 kg weight stack** and a system adjustable to 16 heights and a **multipower rack with a sliding barbell** and adjustable to 19 positions.

The DP-MT then has a series of attachments, both standard and optional, which broaden its applications: a **multi-grip truss for traction exercises**, **parallel bars adjustable to different heights**, **landmines for barbells with a Ø 50 mm hole with relative socket**, **thigh support rollers adjustable to various heights for lat pulldown exercises**.

Furthermore, the machine acts as **storage for Olympic barbells**, with 2 rear inputs, and for Olympic discs through 6 lateral pins, in addition to the rear storage system for the attachments in the range.
