

Self-supporting, transportable aluminum football goal

Product features:

Material: Aluminum

Finish: Powder-coated

Certifications: UNI-EN 748

Pole section: 100/120 mm

Door dimensions: MT 7.32x2.44

Product description:

Self-supporting transportable aluminum football goal certified UNI-EN 748 Football goal regulation size 7.32 x 2.44 metres, self-supporting, transportable, made of light aluminum alloy with ovoid profile section 100x120 mm.

Used for training , the goal is usually **positioned in the center of the field, or parallel to the lateral foul lines**, in order to create a smaller version of the playing field, and **also allow multiple teams to train at the same time**.

The aluminum construction makes the self-supporting football goals **very resistant and at the same time easy to transport, complete with ground support base and rear net support support in galvanized steel** , and can be equipped with wheels (purchasable here) to further facilitate transport.

The **epoxy powder painting** protects the transportable football goals from rust, and at the same time makes the paint resistant to impacts.

The door is delivered disassembled and **complete with PVC hooks for anchoring the net**.

The cost indicated is per single door.

The nets and wheels must be purchased separately
