

Horizontal Accident Prevention Protections for Pitch Edge Benches for coaches and football reserves

Product features:

Material: Steel

Sponge density: 21 kg/m³

Coating: PVC 650gr/m² Fireproof- Class 2 fire rating

Finish: Powder-coated

Outer diameter:

Product description:

Horizontal Accident Prevention Protections for Pitch Edge Benches for coaches and football reserves Anti-shock protections are an indispensable element for pitchside benches mounted on football pitches.

These have the aim of **safeguarding the health of the players** , **avoiding injuries due to any accidental impact** with the benches located at the sides of the playing field.

Required by the FIGC to obtain field approval, they are **made of high-density sponge** with a diameter of 20 cm, and covered in double-layer, tear-proof, class 2 fireproof PVC.

Inside, a **powder-coated steel core** allows for practical attachment to the benches and maintains **their structural integrity**

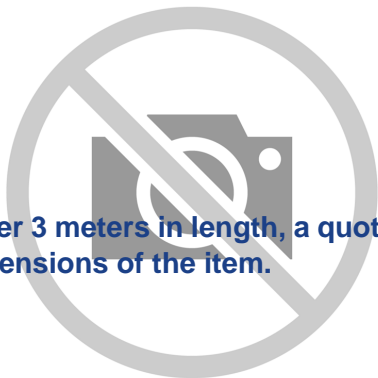

The protections can be mounted on all benches , provided that they are specially prepared.

Upon request it is possible to personalize them with the sponsor's print or the team logo.

The colors available are Blue, Red, Green, Yellow and White.

The cost indicated is per linear metre, to protect the entire structure it is necessary to purchase a surface area equal to the length of the bench.

To complete the set, the bench can also be equipped with the pair of vertical protectors **GS0739**

Attention: after 3 meters in length, a quotation will be necessary for additional transport costs, due to the non-standard dimensions of the item.
