Product description:

Pair of safety guards for Olympic Trellis basketball system tested UNI EN 913 An essential accessory for the **safety of the Olympic basketball facility** , the protections are made of **sponge with a density of 21kg/m³** and a thickness of 5cm, and **covered in 650gr/m² fireproof class 2 PVC**.

The production process involves the application of a row of eyelets in the rear part, which allow closure and a perfect seal on the system.

Upon request, it is possible to request **the personalization of the protections** , applying your own logo, or that of the sponsor.
