

T-REX L kayak

Product features:

Material: Polyethylene

Maximum User Capacity: 100 Kg

Product weight:

Length:

Length:

Like Kayak: Fiume

Product description:

The **T-Rex L** was born from a team project: after tests, comparisons of ideas and prototypes, we are proud to present the new **creek boat** . The continuous rocker together with a flatter tail allow for an easy boof without compromising the speed of the boat.

The rounded sides give **stability** and make **the boat easy to handle and easy even at speed** ; making changes in direction has never been easier. The upper hull is optimized for predictable resurfacing. Its unique rounded shape makes the **T-Rex L the ideal kayak for hard-core paddlers and beginners looking for a stable and responsive boat** .

Despite the large size of the **T-Rex L** , thanks to the clever distribution of volumes, you have the impression of paddling a smaller boat, but the benefit of the volume will be felt as soon as you need it! Our goal was to produce a **tough, uncompromising boat, ideal for steep creeks, large volumes and high-course racing**.

Try it yourself and confirm that we are right! Like the other models, the T-Rex L is also equipped with an easy-to-adjust setup.

Continuously looking for a robust, solid but at the same time quick to adjust adjustment system to guarantee the best boat for both experts and schools. Like the other “X” projects (Six, series – Xt, Xg, Xm, XP3 **and** model behaviors in dynamics and in **different aquatic environments** .
