

Netting to stop balls for fencing sports fields, 45 mm mesh - wire Ø mm. 2

Product features:

Material: HD polyethylene

Wire diameter: 2,0 mm

Sweater: Knotted square 45 mm

Product description:

Protection sheet, fence and cover for sports fields.

Made with **high density polyethylene wire** , with a **diameter of 2 mm** , it is used to prevent the balls from escaping from the playing field.

In particular, this sheet with a **45x45 mm square mesh** is suitable for **installation on tennis and beach tennis courts**.

Despite having a thickness of 2 mm, the **knotted thread** has a **high breaking load** , allowing the sheet to resist stress not only due to play, but also to atmospheric agents.

This type of ball net, with a thickness of 2 mm, is recommended for lateral protection of the pitch.

The sheet is supplied complete with a reinforcing "edging" cord on the long sides, useful for greater stability and easier laying of the sheet in the versions with a height of 3/4/5/6 metres. **For different sizes the edging is not included and must be purchased separately.**

If you wish to equip the entire sheet with edging, it will be necessary to purchase separately only the square footage needed to cover the short sides.

The cover is made to measure, as indicated by the customer.

The cost indicated is per square meter.
