

Monotubular basketball system in galvanized steel- made in accordance with UNI-EN 1270 standard

Product features:

Material: 2 mm thick steel

Finish: Zinc-coating

Accessories: Backboards, steel hoops, nylon nets, bushings

Certifications: Made according to UNI-EN 1270

Pole section: 150X150 MM

Mepa: Disponibile

Product description:

Monotubular basketball system in galvanized steel, 150x150 mm square section - **pair of baskets**, made in accordance with UNI-EN 1270.

Produced entirely in our factories, the **single-pole basketball system** is made in different versions, concerning the customer's needs.

The basketball facility, in its standard version, is equipped with 180x105 cm **bilaminate backboards (FIBA regulation size)** with a thickness of 16 mm, assembled on a steel frame, and with **steel hoops** and **nylon nets** in accordance to regulations.

However, it is also possible to install **plexiglass backboards** and **reclining basketball hoops**.

The overhang of the system is indicated by the customer, up to a maximum of 225 cm (any higher overhangs must be defined and quoted).

In this **galvanized steel version**, the system is particularly suitable for **outdoor use**, because the **zinc-coating** is an **anti-rust and weatherproof solution**, guaranteeing a **good durability**. **Each system is made in accordance to regulations and the UNI-EN 1270 standards.**

The system is supplied with steel bushings for burying and all bolts useful for assembly.
