

Garlando Exclusive table football with outgoing rods

Product features:

Material: 3 cm multilayer plywood

Packaging dimensions:

Product weight:

Table football auctions: Aste Uscenti

Product description:

The **Garlando Exclusive table football with extending rods** is a luxurious table football, the jewel in the crown of the Garlando range without coin mechanism and was created to celebrate the sixtieth anniversary of the company's foundation.

The **cabinet** is built in multilayer plywood and covered in plastic laminate. The resistance of the materials used and the 3 centimeter thickness make the structure extremely robust.

The elegant wenge wood-coloured covering with aluminum finishes is embellished by the absence of visible flanges and screws.

The inclined conical **legs** are made of the innovative HDP (High Density Polymer) plastic material which gives the whole a slender effect. The standard adjustable **feet** allow you to level the playing surface even on floors that are not perfectly flat. The adjustment is carried out manually, without the need to dismantle the legs.

The **rods** have a diameter of 16 mm, in drawn steel, with high resistance to torsion and anti-rust chrome plating. The quality of the material used, together with the thickness of 2.2 millimetres, prevents the temples from bending, maintaining a perfect shape for a long time.

The standard supplied rods protrude from the cabinet - on the side opposite the knob - according to the standard used in Italy and in international competitions.

Safety device for the rods (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as

the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

Brown and gray single-coloured **figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct moulding: they do not move, they do not move, they maintain their position perfectly.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The grey-coloured fixing flanges of the rods are placed only on the inside of the furniture and remain invisible from the outside.

The steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

Silver plastic **knobs** with wenge wood inserts: limit sweating of the hands and allow a safer and more pleasant grip.

The **playing field** is made of tempered glass (5 mm thick) with a grass green background and white lines that reproduce the stadium ground.

Insertion of balls onto the pitch via **a nozzle on one side of the table football table** .

The inside of the goals is lined with felt to reduce noise and prevent goal balls from bouncing out.

The recovery of the balls in the goal, simple and immediate, occurs manually through an opening on one side of the table football with aluminum finish.

Abacus scoreboard, with cubes in colors coordinated with the little men.

Supplied with 10 white Standard model balls

This table football maintains an excellent quality/price ratio
