

Garlando G-5000 table football with retractable rods

#### Product features:

Material: 3 cm multilayer plywood

Packaging dimensions:

Product weight:

Table football auctions: Aste Rientranti

#### Product description:

The **Garlando G-5000 table football with recessed rods** stands out for its soft and original profile and for the sober elegance of the color, a refined gradation with a rosy pear effect emphasized by the original combination of brown and ivory of the players.

The **cabinet** is built in multilayer plywood and covered in plastic laminate. The resistance of the materials used and the 3 centimeter thickness make the structure extremely robust.

The elegant **legs** in lacquered beech wood have a notable thickness of 4 cm ensuring perfect stability on the ground.

The standard adjustable **feet** allow you to level the playing surface even on floors that are not perfectly flat. The adjustment is carried out manually, without the need to dismantle the legs.

The **rods** have a diameter of 16 mm, in drawn steel, with high resistance to torsion and anti-rust chrome plating. The quality of the material used, together with the thickness of 2.2 millimetres, prevents the temples from bending, maintaining a perfect shape for a long time.

The rods supplied as standard protrude from the cabinet - on the side opposite the knob - according to the standard used in Italy and in international competitions.

**Safety device for the rods** (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

Single-colored **figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods molding: they do not move, they do not move, they maintain their position perfectly. Team colours: ivory and brown.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The **rods** are fixed to the furniture using nylon bushings.

The steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

Silver plastic **knobs** with wooden inserts as standard: limit sweating of the hands and allow a safer and more pleasant grip.

The **playing field** is made of tempered glass (5 mm thick) with a grass green background and white lines that reproduce the stadium ground.

Insertion of balls onto the pitch via **two outlets on the sides of the table football table** .

The inside of the goals is lined with felt to reduce noise and prevent goal balls from bouncing out.

The recovery of the balls in the goal, simple and immediate, occurs manually through an opening on one side of the table football with aluminum finish.

**Abacus** scoreboard, with cubes in colors coordinated with the little men.

Supplied with 10 white Standard model balls

**This table football maintains an excellent quality/price ratio**
