

Garlando G-2000 Evolution table football with outgoing rods

Product features:

Material: MDF (Medium Density Fiberboard)

Packaging dimensions:

Product weight:

Table football auctions: Aste Uscenti

Product description:

The **Garlando G-2000 Evolution table football with protruding rods** stands out for its elegant design and is enlivened by the little figures in the traditional red and blue, for an effect of notable visual impact.

The **MDF cabinet** is sturdy and has a 2.5 cm thick melamine coating.

The inclined **legs** in MDF with melamine coating have a thickness of 40 mm.

Adjustable **feet** for a perfectly level playing field.

The **rods** have a diameter of 16 mm, in drawn steel, with high resistance to torsion and anti-rust chrome plating. The quality of the material used, together with the thickness of 2.2 millimetres, prevents the temples from bending, maintaining a perfect shape for a long time.

Safety device for the rods (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

The standard supplied rods protrude from the cabinet on the side opposite the knob.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

Single-colored **figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct

molding: they do not move, they do not move, they maintain their position perfectly. Team colours: red and blue.

The **rods** are fixed to the furniture using nylon bushings.

The steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

Plastic **knobs** with ergonomic grip.

The **playing field** is made of tempered glass (5 mm thick) with a grass green background and white lines that reproduce the stadium ground.

Insertion of balls onto the pitch via **two outlets on the sides of the table football table** .

The recovery of the balls in the goal, simple and immediate, occurs manually through an opening on one side of the table football with aluminum finish.

Cubed plastic scorecard , in colors coordinated with the little men.

Supplied with 10 white Standard model balls

This table football maintains an excellent quality/price ratio
