

## Garlando Open Air table football with retractable rods and folding legs

### Product features:

Material: Plastic

Packaging dimensions:

Product weight:

Table football auctions: Aste Rientranti

Playing field:

### Product description:

The **Garlando Open Air table football with retractable rods** is designed for the outdoors and built with materials and components resistant to atmospheric agents. It combines professional-level playability thanks to the best of Garlando components.

The **cabinet** is made of molded plastic (polypropylene loaded with glass fiber for increased strength) and is resistant to atmospheric agents. Blue and cloth in colour, it has a thickness of 19 mm.

The **legs**, in the same material as the furniture, have a thickness of mm. 10 and can be easily folded onto the sides of the table by operating the two knobs. The crosspieces, with a perforated design for a very light effect, provide further stability. This model does not provide the possibility of installing adjustable feet.

The **rods** have a diameter of mm. 16 in drawn steel with high resistance to torsion with triple anti-rust chrome plating. The quality of the material used, together with the 2 millimeter thickness, prevents the temples from bending, maintaining a perfect shape for a long time. It is possible to choose between outgoing rods and retracting (telescopic) rods.

The special triple-layer **chrome plating** to which both the outgoing rods and the telescopic safety rods are subjected combats the formation of rust even after years in which the table football table is subjected to the elements.

**Safety device for the rods** (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The rods are fixed to the furniture using nylon bushings.

Single-colored **figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct molding: they do not move, they do not move, they maintain their position perfectly. Team colours: white and blue.

**The rust-proof stainless steel ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

The playing **field** is made of grass green plastic laminate with white lines that reproduce the stadium ground screen-printed with special water-resistant inks. They do not fade in the sun and are not afraid of humidity.

Insertion of balls onto the pitch via **two outlets on the sides of the table football table** .

The recovery of the balls in the goal, simple and immediate, occurs manually through an opening on one side of the table football with aluminum finish.

**Abacus** scoreboard, with cubes in colors coordinated with the little men.

Supplied with 10 white Standard model balls

**This table football maintains an excellent quality/price ratio**
