

Garlando G-500 Weatherproof blue table football with protruding rods

Product features:

Material: 3 cm multilayer plywood

Packaging dimensions:

Product weight:

Table football auctions: Aste Uscenti

Playing field:

Product description:

The blue **Garlando G-500 Weatherproof football table with protruding rods** is created to meet the needs of all those who wish to dedicate themselves to their favorite outdoor game, it is made with special components and materials resistant to atmospheric agents.

The **furniture** is made of multilayer plywood covered in plastic laminate, water resistant and glued together with a special non-water-soluble glue. The 3 centimeter thickness makes the structure practically indestructible.

The **legs** are made of metal with epoxy powder coating, resistant to rain. The considerable dimensions (9 x 9 cm) guarantee the necessary stability on the ground. It has adjustable feet as standard, to always have a perfectly level playing field on any terrain.

The **rods**, with diameter mm. 16 in steel, they are high-resistance drawn with anti-rust chrome plating. The quality of the material used, together with the 2 millimeter thickness, prevents the temples from bending, maintaining a perfect shape for a long time. It is possible to choose between outgoing rods and retracting (telescopic) rods.

The special triple-layer chrome plating to which both the outgoing rods and the telescopic safety rods are subjected combats the formation of rust even after years in which the table football table is subjected to the elements.

Safety device for the rods (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the

furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The rods are fixed to the furniture using nylon bushings.

Single-colored **figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct molding: they do not move, they do not move, they maintain their position perfectly. Team colours: white and blue.

The steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

The playing **field** is made of plastic laminate glued to the base with special non-water-soluble glues. The white lines that reproduce the stadium ground are screen-printed with special water-resistant inks: they do not fade in the sun and are not afraid of humidity.

Insertion of balls onto the pitch via **two outlets on the sides of the table football table** .

The recovery of the balls in the goal, simple and immediate, occurs manually through two portholes.

Abacus scoreboard , with cubes in colors coordinated with the little men.

Supplied with 10 Standard model orange balls for better visibility on the gray playing field.

This table football maintains an excellent quality/price ratio
