

Garlando Class Weatherproof Table Football with protruding rods and upper glass

Product features:

Material: 3 cm multilayer plywood

Packaging dimensions:

Product weight:

Table football auctions: Aste Uscenti

Product description:

The **Garlando Class Weatherproof football table with protruding rods and upper glass** is created for the outdoors, built with components and materials that guarantee durability over time even in unfavorable weather conditions.

The **cabinet** is made of multilayer marine plywood covered in plastic laminate, water resistant and 25 mm thick. This table football is blue in color with silver logo and aluminum edges.

The **square legs** (9 x 9 cm) are in metal with silver paint. The standard adjustable feet allow you to level the playing surface even on floors that are not perfectly flat. The adjustment is carried out manually, without the need to dismantle the legs.

The **rods**, with diameter mm. 16 in steel, they are made of high-resistance drawn wire with special triple-layer anti-rust chrome plating.

Safety device for the rods (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The rods are fixed to the furniture using nylon bushings.

Single-colored **figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods molding: they do not move, they do not move, they maintain their position perfectly. Team colours: red and blue.

The steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

Plastic knobs with ergonomic grip.

The playing **field** is made of plastic laminate glued to the base with special non-water-soluble glues. The background is grass green with white lines that reproduce the stadium ground. The playing area is completely covered by a tempered upper glass which muffles the noise of the game and makes any tampering during the game impossible, while preventing the possibility of the ball escaping from the playing area.

The introduction of the balls into the field occurs manually using an elevator placed on the side of the cabinet next to the coin acceptor. The system is not accessible from the outside, to prevent the balls from being stolen.

Abacus scoreboard, with cubes in colors coordinated with the little men.

Supplied with 10 Standard model orange balls.

This table football maintains an excellent quality/price ratio
