

Table football Garlando Tournament with outgoing auctions

#### **Product features:**

Material: 3 cm multilayer plywood and MDF

Packaging dimensions:

Product weight:

Table football auctions: Aste Uscenti

Playing field:

#### **Product description:**

**The Garlando Tournament table football with protruding rods** has a structure capable of withstanding countless games played by the most avid and passionate players without deforming in the slightest.

The **furniture** is made of alternating and combined layers of plywood and MDF to obtain an extremely robust structure (the thickness is 3 cm) and at the same time flexible, capable of withstanding repeated and intense stress without deforming. Covered in black plastic laminate and satin aluminium.

The structure of the furniture is assembled by means of a system of metal hinges secured by screws and bolts, without the use of glues which would make it difficult to replace parts.

**The legs** are in epoxy powder painted metal. The considerable dimensions (9 x 9 cm) guarantee maximum stability on the ground, even during the race.

The new type adjustable **feet** allow you to level the playing field and increase the stability of the legs.

The **rods**, with diameter mm. 16 in steel, they are high-resistance drawn with anti-rust chrome plating. The quality of the material used, together with the thickness of 2.2 millimetres, prevents the temples from bending, maintaining a perfect shape for a long time.

**Safety device for the rods** (telescopic rods): upon request it is possible to supply the table football with telescopic safety rods to replace the outgoing ones. Made of the same material and with the same technical characteristics as the outgoing ones, they differ in their operation, which ensures the maximum level of safety.

In **telescopic rods**, a smaller diameter rod slides inside the rod with the players, the end of which reenters the furniture without coming out, thus avoiding the risk of hitting children's faces and eyes.

The rods are fixed to the furniture by means of nylon flanges containing a ball bearing.

**Little figures** in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct molding: they do not move, they do not move, they maintain their position perfectly. Team colours: red / blue.

The **knobs** are made of plastic with wooden inserts which limit sweating of the hands and allow for a more pleasant and secure grip.

The rust-proof stainless steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

The playing **field** is made of tempered glass with a grass green background and white lines that reproduce the stadium ground. The outside of the goals is covered in aluzinc, a very robust aluminum and zinc alloy that prevents the formation of dents even after numerous matches.

**Abacus** scoreboard, with cubes in colors coordinated with the little men.

**Insertion** of balls onto the pitch via a nozzle on one side of the table football table. The outside of the goals is covered in aluzinc, a very robust aluminum and zinc alloy that prevents the formation of dents even after numerous matches.

Furthermore, it is possible to open the cabinet to access its interior. A metal support is automatically activated to support the upper part of the football table when it is raised, allowing you to carry out the necessary operations in complete safety.

With the cabinet open, the playing field can be separated from the upper part of the cabinet by opening two latches, to facilitate cleaning and the possible replacement of parts. The internal mechanism for sliding the balls is made up of individually replaceable metal elements.

Tournament features a mechanical pull coin acceptor as standard, adjustable for any type of coin or token, which releases all the balls at the same time. The following mechanical coin acceptor options are available upon request: coin acceptor with match counter, coin acceptor with protected match counter, coin acceptor with protected match counter and ejector.

Tournament can be equipped with an electromechanical system that offers greater possibilities for coin set settings. For maximum programming versatility of the coin mechanism, the table football table can be equipped with the GARL 2001 electronic system, which allows you to accept coins of various sizes, calculate credits, offer bonuses and much more.

Tournament can also be supplied with the coin acceptor disabled for free play.

Supplied with 10 white Standard model balls.

**This table football maintains an excellent quality/price ratio**
