

Garlando Tournament table football with retractable shafts, Ficb approved

Product features:

Material: 3 cm multilayer plywood and MDF

Packaging dimensions:

Product weight:

Table football auctions: Aste Rientranti

Playing field:

Product description:

The Garlando Tournament table football with retractable rods is the model chosen by the Ficb (Italian Table Football Federation).

The **furniture** is made of layers of plywood and MDF alternating and combined together to obtain an extremely robust structure (the thickness is 3 cm) and at the same time flexible, capable of withstanding repeated and intense stress without deforming. Covered in black plastic laminate and satin aluminium.

The **structure of the furniture** is assembled by means of a system of metal hinges secured by screws and bolts, without the use of glues which would make it difficult to replace parts.

The covering is in black plastic laminate and satin aluminium, with Tournament serigraphs and the official FICB logo, both tricoloured.

Numbered approval plaque placed inside the playing surface, which allows you to participate in FICB tournaments and championships.

The **legs** are made of metal painted with epoxy powder in silver colour. The considerable dimensions (9 x 9 cm) guarantee maximum stability on the ground even during the race.

The adjustable **feet** allow you to level the playing field and increase the stability of the legs.

The **rods**, with diameter mm. 16, are made of drawn steel with high resistance to torsion with anti-rust chrome plating. The rods are fixed to the furniture by means of nylon flanges containing a ball bearing.

The rust-proof stainless steel **ball bearings** inside the bushings significantly improve the smoothness of the shafts: it increases the speed, and therefore the pleasantness, of the game, while reducing the stress on the players' wrists.

Little figures in plastic material (moplen) representing a stylized human figure, fixed to the rods with direct molding: they do not move, they do not move, they maintain their position perfectly. Team colours: red / blue.

Springs of reduced length (mm. 22 instead of the classic 36 mm) which allow the blind areas of the three-man rod to be reduced, and sometimes even completely eliminated: they maintain the correct distance between the man and the side, allowing to block the ball against the bank to prevent it from passing through.

Plastic **knobs** with wooden inserts that limit hand sweating and allow for a more pleasant and secure grip.

The playing **field** is made of tempered glass (5 mm thick) with a grass green background and white lines that reproduce the stadium ground. Double spirit level in the center of the playing field.

The **inside of the goals** is lined with felt to reduce noise and prevent goal balls from bouncing out.

The **outside of the goals** is covered in aluzinc, a very robust aluminum and zinc alloy that prevents the formation of dents even after numerous matches.

Furthermore, it is possible **to open the cabinet** to access its interior. A **metal support** , which is activated automatically, supports the upper part of the football table when it is raised, allowing you to carry out the necessary operations in complete safety.

With the cabinet open, the playing field can be separated from the upper part of the cabinet by opening two latches, to facilitate cleaning and the possible replacement of parts.

The **internal mechanism** for sliding the balls is made up of individually replaceable metal elements. The most directly accessible end parts are beveled to prevent the operator from injuring himself when handling them and the balls from being damaged.

Abacus scoreboard, with cubes in colors coordinated with the little men.

Tournament features a mechanical pull **coin acceptor** as standard, adjustable for any type of coin or token, which releases all the balls at the same time.

Upon request, the following **mechanical coin acceptor options** are available: coin acceptor with match counter, coin acceptor with protected match counter, coin acceptor with protected match counter and ejector.

In addition to the various types of mechanical coin acceptors, Tournament can be equipped with an **electromechanical system** , which offers greater possibilities for setting the coin acceptor.

Covered can also be supplied with the coin mechanism disabled to play for free.

For maximum programming versatility of the coin mechanism, the table football table can be equipped with the GARL 2001 electronic system, which allows you to accept coins of various sizes, calculate credits, offer bonuses and much more.

Supplied with 10 white Standard model yellow balls.

This table football maintains an excellent quality/price ratio
